

STOP ME GAME Solder Kit

Assembly instructions

www.solde.red/333138

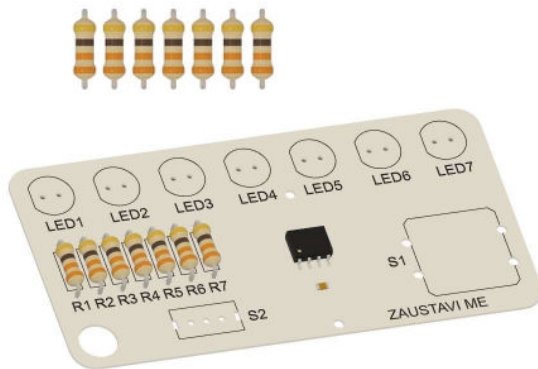

Thank you for buying this product. Make sure the exercise contains all the necessary components as shown in the image to the left. Solder the components following the steps shown in figures 1 to 6.

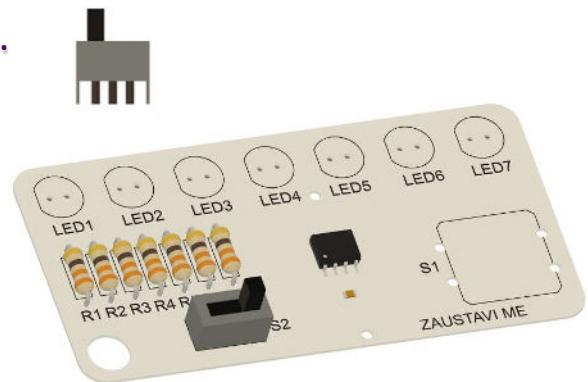

When you have assembled the game, place the battery in the provided holder, turn on the game by setting the S2 switch to the ON position and play the 'Stop Me' game. The LEDs will turn on at an increasing rate and your goal is to stop the light on the green diode by pressing the button when it lights up. If your reaction is not fast enough, all the LEDs will turn on, and the game will start over.

Have fun!
